

## TABLE OF CONTENTS

Personnel	vii
Publications and Reports	xv
Introduction	xix

### GENERAL PHYSICS

I.	Molecular Beams	1
	Stimulated Desorption by Low-Energy Electrons	2
	Superfluid Helium Critical Velocity Model	5
	Detection of Quantized Vortex Lines in Superfluid Helium at a Known Pinning Site	6
	Survival of Frog Skin Exposed to Vacuum	11
	Design of an Achromatic Combined Electron Mirror and Accelerating Lens	17
II.	Microwave Spectroscopy	21
	Work Completed	22
	Low-Temperature Behavior of Radio-Frequency Surface Impedance in Metals	22
	Work in Progress	23
	Propagating Waves on a High Dielectric Slab	23
III.	Atomic Resonance and Scattering	29
	Van der Waals Molecules	30
	Magnetic Moment of the Deuteron	32
	Diamagnetic Shielding of H <sub>2</sub>	35
	Interactions in the Excited State	38
IV.	Radio Astronomy	39
	Radio Observations of Scorpius X-1	41
	Continuum Radio Structure of the Galactic Disk	47
	M. I. T. Three-Element Interferometer	50
	21-Centimeter VLBI Observations of Pulsars	51
	New H <sub>2</sub> O Sources Associated with Infrared Stars	53
	Observations of High-J Atmospheric O <sub>2</sub> Lines at Arecibo Observatory	59
V.	Low-Temperature Millimeter Wave Receivers	61

## CONTENTS

VI.	Cooperative Phenomena in Solids and Fluids	63
VII.	Gravitation Research	65
	Measurement of Intrinsic Laser Phase Noise	67
VIII.	Nuclear Resonance	73
IX.	Physical Electronics and Surface Physics	75
	Experimental Measurements of the Spatial Distribution of H <sub>2</sub> Desorbed from Copper Single Crystals	77
X.	Physical Acoustics	83
	Upstream and Downstream Sound Radiation into a Moving Fluid	83
	Sound Absorption by a Single Resonator in a Duct	90
XI.	Electrodynamics of Media	95
	Experiments on a Room-Temperature TEA CO Laser	96
	Preliminary Investigation of a "Superradiant" Neutral Argon Line in a TEA Laser	97
XII.	Laser Applications	99
	Laser Molecular-Beam Techniques for High-Resolution Spectroscopy	101
	Molecular-Beam Stabilized Argon Laser	104
	Two-Dimensional Laser Doppler Velocimeter	108
	Multiple-Frequency Holography Using Pulsed Ion Lasers	113
	Coherence Properties of a Flash-Lamp-Pumped Dye Amplifier	116

## PLASMA DYNAMICS

XIII.	Plasmas and Controlled Nuclear Fusion	121
	Waves and Radiation	121
	Diffusion and Turbulence	122
	Plasma Diagnostics	123
	Fusion-Related Studies	124
	Feedback Stabilization	125
	High-Temperature Plasma Physics	126

## CONTENTS

XIV.	Gaseous Electronics	127
	Stimulated Ultraviolet Emission from a Plasma	128
	Production of Plasma by Laser Breakdown	144
XV.	Relativistic Beams	151
XVI.	Applied Plasma Research	153
	Active Plasma Systems	153
	Observations of Nonlinear Interactions in a Beam-Plasma System	154
	Analytic Studies of Nonlinear Plasma Problems by Symbolic Manipulation Programs on a Computer	167
	Plasma Physics and Engineering	186
	Plasma Effects in Solids	188
	Surface Mobility on Silicon from Acoustoelectric Current Measurements	188
	Laser-Plasma Interactions	195
	Optical Frequency Mixing in a Plasma	195
	Plasma Dispersion Function: Application to Lamb Dip	208

## COMMUNICATION SCIENCES AND ENGINEERING

XVII.	Processing and Transmission of Information	217
	A Near-Optimum Receiver for the Binary Coherent State Quantum Channel	219
	Statistically Dependent Quantum Systems: The Paradox of Einstein, Podolsky, and Rosen	225
XVIII.	Detection and Estimation Theory	231
	An Integrated Approach to the Estimation of the Dynamics of a Moving Source by a Passive Observer	232
XIX.	Speech Communication	245
	Further Theoretical and Experimental Bases for Quantal Places of Articulation for Consonants	247
	Durational Characteristics of Prestressed Word-Initial Consonant Clusters in English	253
	Speaker Recognition and Verification Using Linear Prediction Analysis	261

## CONTENTS

XX.	Linguistics	269
	A Revised Directional Theory of Rule Application in Phonology	270
	Clause Structure and the Perceptual Analysis of Sentences	277
	Formal Properties of Lexical Derivations	280
	Nonglobal Rules in Klamath Phonology	288
XXI.	Cognitive Information Processing	311
XXII.	Communications Biophysics	317
	Cochlear Potential Response at the Round-Window Membrane of the Cat	323
	Neural Responses of Lateral-Line Organs in <u>Necturus</u> <u>Maculosis</u> to Direct Mechanical Stimulation	332
	An Optimum Processor Theory for the Central Formation of the Pitch of Complex Tones	338
XXIII.	Neurophysiology	345
XXIV.	Signal Processing	347
	Localization of Sound in Space in the Vertical Median Plane	349
	Simulation of Auditory Signals for Localization	352
	Author Index	353
