ABSTRACT

From 1933 to 1976, Professor Lawrence B. Anderson taught in
the MIT Department of Architecture, and from 1947 to 1971,
he served as its chairman and dean. Concurrently, from 1937
to 1972, he was principal partner in the architecture firm
that designed the first important modern building on an
American university campus in 1939.

During a lifetime of teaching and professional practice, LBA
gained knowledge and wisdom. As an eminent professional
adviser, he influenced architectural projects throughout the
world. Because he was a remarkably clear thinker and accom­
plished and prolific writer, we are fortunate that his
papers remain accessible to us. Professor Anderson taught
generations of students much more than architectural design:
he taught professional good manners, how to practice archi­
tecture responsibly, with grace, style, and decorum. Through
his papers, he will continue to teach for generations into
the future.

In 1994, Lawrence Anderson died at age 87. This thesis
dокументs the whole of his prodigious output of personal and
professional papers, published and unpublished, at their
present eleven locations. It is the completion of the first
stage of creating a coherent archive.

INTRODUCTION

AN ARCHITECTURE OF DECORUM

Twenty-two years ago (1976) Lawrence B. Anderson retired from the Department of Architecture at MIT after 43 years of teaching, including 24 years as chairman and dean. Four years have passed since his death at age 87. Sadly he is gone, but his teachings survive. Students in the field, some old and some also gone, but many in the prime of their practice, perpetuate what he taught and how he taught. Some, who are teachers, sustain the principles of his pedagogy.

One needn’t ask if his survivability is because of his personality as a great teacher or because of the qualities and attitudes he had towards architectural design. For LBA was much more than a design architect. He exemplified what a complete architect should be: one who transcends physical design to embrace social responsibility and the essential decorum of architecture as contributing to qualitative life.

My first undergraduate design studio was taken with Professor Anderson in the fall term of 1974, the last studio he taught before retiring. His teachings remain indelibly imprinted, for me and for everyone privileged to have studied with him. Changes in architectural practice have not erased his influence: what he taught has traversed styles and tech-
nologies. He taught much more than architecture as functional built-form, more than design process as means to an end, more than architecture as art or aesthetics. He taught professional good manners, how to practice architecture responsibly, how to design with grace, subtlety, and natural decorum (aesthetic common sense), how to render difficulties with the appearance of an effortless style. It seemed as if, for him, works of architecture should be, metaphorically speaking, like well-mannered people: appropriate to their role in life, dignified but not exalting, polite but not effusive, modest but not humble. Buildings and people should interact with mutual respect. And neither a building nor a person should take good manners for granted. Principles of decorum that interweave people in a variegated society must also interweave people with architectural structures, just as, in natural synergy, trees fit to forests and flowers to meadows, which comes down to not much more than the exercise of common sense (and no need for more than that). Yet no power of Anderson’s principles suppresses individual style, for decorum applies to interaction, to effect and response, precluding nothing that denies the unique or, for that matter, the deviant. Principles that transcend style persist like classical orders. The strong personalities of great teachers of architecture outlive the time-bound utility of their products.
It is essential, therefore, that through times of change, Professor Anderson’s papers and records be preserved. Fortunately, he was an excellent writer, able to communicate with both professional architects and the public. And he lived by his principles, so even the style of his life, domestic and professional, is worth documenting and preserving for generations of students to follow.

LBA’s personal and professional papers are not now assembled in one comprehensive archive but in several locations, each location organized as to the specific reason why there. One hopes that eventually an archive will be established along the lines of the Josep Lluis Sert Collection at Harvard University’s Graduate School of Design, which was assembled by a professional archivist and funded by the Getty Trust.*

This thesis documents the whole of Lawrence Anderson’s papers at their current locations. So it constitutes completion of the first stage of creating a coherent archive: an intermediate document that should lead to a comprehensive indexed catalog of holdings to which other documents can be added by former students and by colleagues. The following pages locate sources and their contents: many hundreds of papers that document an extraordinary life of achievement.
that contributed immeasurably to the professional lives of students, influenced the design sensibility of many practitioners, and affected built-form environments from Boston City Hall to the back porch of his next-door neighbor's house in Lincoln.

The Sert Collection was created by Mary F. Daniels, Francis Loeb Library. Other architects' archives at Harvard include: the Walter Gropius Collection, with manuscripts housed at Houghton Library and drawings housed at Busch-Reisinger Museum, and the Hugh Stubbins Archive at the Graduate School of Design. The Bancroft Library at the University of California at Berkeley created an excellent archive for William Wilson Wurster, also a former architecture dean at MIT.

William J. Mitchell, current MIT Dean of Architecture & Planning, in his essay, "Architectural Archives in the Digital Era," American Archivist, Spring 1996, writes "Two of my predecessors at MIT, Pietro Belluschi and Lawrence Anderson, eminent former deans of architecture and planning, recently passed away. Both left extraordinary paper records which will be immensely valuable as historical documents of the architecture of their time, and of the people and the social processes connected with it."

ANDERSON BECKWITH & HAIBLE STORAGE

John Haible is the son of William Haible, who was a partner in Lawrence Anderson’s architectural firm. He maintains the Woburn storage facility where construction documents and business correspondence for the firm are stored.

William Haible died 3 December 1994. He is survived by four sons: John Haible of Arlington, MA, William Haible of Berkeley, CA, Thomas (Spike) Haible of Harpswell, ME, and Paul Haible of San Francisco. Lawrence Anderson’s wife, Rosina, and William Haible’s wife were first cousins.
