### CONTENTS

#### General

- Administrative and Service Research

#### Research Projects

**I. Microwave and Physical Electronics**
- A. Construction of 5 mm, Oxford Type Tube
- B. Construction of High Power S-band Magnetron
- C. Magnetron Theory Research
- D. Oxide Cathode Research
- E. The Transmission of the Photo-effect in Silicon

**II. Microwave Physics**
- A. Radio Frequency Spectra
  - 1. Oxygen Absorption Spectra at 5 mm.
  - 2. Caesium Hyperfine Structure
  - 3. Molecular Beams
- B. Gas Discharge Research
  - 1. Low Pressure Discharges
  - 2. Microwave Spark Breakdown
- C. Low Temperature Research
- D. Ferromagnetism at Microwave Frequencies

**III. Modern Electronic Techniques Applied to Physics and Engineering**
- A. Studies Leading to the Design of a Microwave Accelerator
- B. Ultrasomics Research Program
- C. High Speed Oscilloscope and Magnetron Moding
- D. Electronic Instruments for Measuring High Speed Particles in Nuclear Experiments
- E. Measurement and Control of De-ionization Time in Thytratrons
- F. Experimentation in Photoelectric Spectrophotometry
- G. Liquid Filled Chamber to be Used in the Photographing of Very High Energy Ionizing Particles
- H. Synchrotron Project

**IV. Communications and Related Projects**
- A. Noise Interference and Distortion in Pulse Modulation
- B. Stabilized Oscillator Problems
  - 1. Modulation and Stabilization
  - 2. D.C. Amplifier Problems
- C. Circuit Problems
  - 1. Study of Waveguides With Dissipative Walls
  - 2. The Broadbanding of Microwave Networks
  - 3. The Extension of the Methods and Procedures of the Circuit
    Synthesis to Active Networks Involving Vacuum Tubes
  - 4. Transients in Waveguides
  - 5. Miscellaneous Waveguide Problems
  - 6. Impedance of Magic Tees
- V. Aids to Computation
  - A. Shaft Position Indicator, Reversible Counters
  - B. Electro-Mechanical Computers
