Publications and Reports 4
Research Projects

I Microwave and Physical Electronics
A High-Power Magnetron Research 5
B Cathode Research 6
1 Cathode Interface Studies 6
2 The Interface as a Blocking Layer 8
3 Conductivity and Work Functions of Oxide Cathodes 8
4 Spectral Emissivity of Tungsten 9
5 Electron Emission in Accelerating and Retarding Fields 10
C Ionization Gauge Research 10
D Properties of Cathode-Ray Tube Screens 10
E Determination of Emission Properties of Single Crystals 10
F Construction of 5-mm Oxford Tyne Tube 11
G Traveling-Wave Amplifier Tubes
1 Theoretical Considerations 11
2 Experimental Studies 12

II Microwave Physics
A Microwave Spectroscopy 13
1 Microwave-Frequency Bridge 13
2 Sweep Spectroscope 13
3 Audio-Frequency Bridge 13
4 Caesium Spectrum 13
B Molecular Beam Research 14
1 Hyperfine Structure of Hydrogen 14
2 Second Molecular Beam Resonance Apparatus 20
C Low Pressure Gas Discharges 20
D Low Temperature Research 23
1 Helium Liquifiers 23
2 Studies on Liquid Helium 24
3 Studies on Beryllium 24
4 Superconductivity at 1.25 cm 24
5 Magnetic Nuclear Resonance Experiments 26
6 Adiabatic Demagnetization 34
7 The Classification of Phase Transitions 35
E Paramagnetism at Microwave Frequencies 35

III Modern Electronic Techniques Applied to Physics and Engineering
A Design and Construction of a Microwave Accelerator 36
B Ultrasonics Research Program 37
1 Ultrasonic Measurements in Liquid Argon and Liquid Helium 37
2 Ultrasonics Measurements above 100 Mc/sec 38
3 Ultrasonic Absorption in Metals 39
4 Paramagnetic Relaxation Experiment 40
5 Attenuation in Single Crystals 40
C Cyclotron R-F Project 41
D Three-Cm Sweep-Frequency Oscillator 41
IV Communications and Related Projects
A Modulation Studies Spectrum Utilization, Efficiency of Power Utilization, Signal-to-Noise Ratios
1. General Analysis of the Transmission of Information 42
2. Pulse Modulation Studies 43
3. Properties of Random Noise 43
4. The Action of Limiters and Discriminators in FM Receivers in the Presence of Noise 43
B Stabilized Oscillator Problems 44
1. Equal-Arm Microwave Frequency-Discriminator 44
2. Distortion Due to Frequency Modulation of a Frequency-Stabilized Klystron 44
3. Square-Wave Modulation of the Pound Frequency Stabilizer 45
C Multipath Transmission 46
D Response of Networks to Frequency Transients 50
V Miscellaneous Problems
A Locking Phenomena in R-F Oscillators 51
B Electronic Differential Analyzer 51
C Electronic Potential Mapping 54
D Broadbanding of Arbitrary Impedances 60
E Approximation of a Specified Amplitude and Phase by a Linear Network 60
F Synthesis of Optimum Linear Systems 61
