TABLE OF CONTENTS

Personnel v
Publications and Reports viii
Introduction xi

I. Physical Electronics 1
   Physical Electronics in the Solid State 1
   Characteristics of Junctions in Germanium 1
   Surface States on Semiconductors 1
   Electroluminescence 1

II. Microwave Gaseous Discharges 3
    Highly Ionized Plasmas 3
    Plasma Diamagnetism 4
    Measurements of Electron Collision Probabilities in Gases 6
    High-Current Ion Source 9
    Pulse Breakdown in a Magnetic Field 10

III. Solid State Physics 13
    Frequency Spectrum of Magnesium 13

IV. Microwave Spectroscopy 16
    Ammonia Maser 16
    Nuclear Relaxation 16
    Measurement of Paramagnetic Spin-Lattice Relaxation Times with Pulse Techniques 17
    Micromodulator 21

V. Nuclear Magnetic Resonance and Hyperfine Structure 22
    Nuclear Resonance Spectra of Hindered Internal Rotors 22
    Paramagnetic Resonance in Atoms Aligned by Electron Impact 22

VI. Microwave Electronics 25
    Mode Coupling in Periodic Cavity Chains 25
    Determination of the Correlation Ratio $II/S$ of the Noise in an Electron Beam 29
    Electron-Stimulated Ion Oscillators 30
    Multicavity Klystrons 39

VII. Atomic Beams 45
     X-Band Measurement of Atmospheric Refractive Index Fluctuation 45
CONTENTS

VIII. Frequency Modulation 52
    Feedforward Across the Limiter 52
    Capture of the Weaker Signal 53
    Dynamic Trap 55
    Amplitude Limiters 55
    FM Transients 55
    Design and Adjustment of Bandpass Amplifiers 56

IX. Statistical Communication Theory 63
    Invariance of Correlation Functions Under Nonlinear Transformations 63
    Optimum Linear Filters for Finite Time Integrations 65
    A Viewpoint for Nonlinear System Analysis 76

X. Process Analysis and Synthesis 79
    Rhythm Extraction in a Musical Composition (continued) 79

XI. Transistor and Diode Studies 90
    Design of Transformerless Transistor Audio Amplifiers 90
    Dielectric Modulators 95

XII. Statistical Thermodynamics 96

XIII. Circuit Theory 100
    A Predetection Diversity Combiner 100
    Synthesis of Two Terminal-Pair Resistor Networks 100

XIV. Network Synthesis 103
    Some Generalizations of Linear Network Analysis that are Useful When Active and/or Nonbilateral Elements are Involved 103
    Derivation of Hilbert Transforms and the Paley-Wiener Criterion from Cauchy's Integral Formula 114
    An Independent Proof of the Darlington Theorem 120

XV. Microwave Theory 123
    Geometric-Analytic Theory of Noisy Two-Ports 123
    Cascading of Noisy Two-Port Networks 125
    Geometric-Analytic Theory of Partly Polarized Electromagnetic Waves 126

XVI. Neurophysiology 129
    Three of von Neumann's Biological Questions 129
