The intent of this exercise is to develop your ability to visualize landform and contours. Above, you see Earth Mound by environmental artist Herbert Bayer. The diameter of the earthwork is 40 feet, measured from the outside of the mounding. Assuming that:

- the ground level is zero;
- the top of the circular ring is 3.5 feet high;
- the mound inside the circle is 4.5 feet high;
- the depression is 2.5 feet deep;

Directly on the picture, draw the contours as you visualize them moving around the various landforms.

Earth Mound, Aspen Colorado, is by Herbert Bayer.
