TABLE OF CONTENTS

GENERAL PHYSICS

I. Molecule Microscopy
   Factors Affecting Resolution of Scanning Desorption Molecule Microscopy   1

II. Physical Electronics and Surface Physics
   Permeation of Hydrogen through Metals   9

III. Atomic Resonance and Scattering
   Two-Photon High-Resolution Spectroscopy   21

IV. Quantum Electronics
   Nonlinear Phenomena
      Short Laser Pulses: Passive Mode-Locking Solution   25

V. Microwave and Millimeter Wave Techniques
   Low-Temperature Millimeter Wave Receivers
      Frequency-Power Formulas for Josephson Junctions   31
      K-band GaAs Schottky-Barrier Diode Mixer   33
      118-GHz Mixer Development   34

VI. Radio Astronomy
   Environmental Sensing with Nimbus Satellite Passive Microwave Spectrometers   35

VII. Transport Phenomena in Solids
   The Anisotropy Ratio of Electrical Conductivity in Graphite   41

VIII. Physical Acoustics
   Attenuation of Sound in Turbulent Pipe Flow   43
   Interaction of Sound with a Side-Branch Cavity   43
   Acoustics of an Open-Ended Tube with Flow   44

PLASMA DYNAMICS

IX. Plasma Dynamics
   Laser-Plasma Interactions   47
      Two- and Three-Dimensional Stability Analysis for Second-Order Laser-Plasma Interactions   48
      Three-Dimensional Dispersion Relations for Third-Order Laser-Plasma Interactions   59

QPR No. 113
CONTENTS

Intense Relativistic Beam-Plasma Interactions 75
  Structure of Plasma Generated by Irradiation of a Solid Target from a Pulsed CO₂ Laser 75
  Magnetic Insulation of an Intense Relativistic Electron Beam 82
  Beam-Plasma Interaction in a Longitudinal Density Gradient 86
Experimental Studies - Waves, Turbulence, and Radiation 93
  Wave Conversion near Lower Hybrid Resonance 93
General Theory 105
  Parametric Excitation of Ion Waves by Resonance Cone Fields near the Lower Hybrid Frequency 105
  Three-Dimensional Pulse Evolution of Coupled Wave-Wave Interactions 112
  Third-Order Nonlinear Wave-Wave Interactions: A Differential-Equation Approach 117

COMMUNICATION SCIENCES AND ENGINEERING

X. Processing and Transmission of Information 129
  Optical Channels 129
    Uniqueness of the Optimum Receiver for the M-ary Pure State Problem 129
  Complexity of Networks and Algorithms 131
    Complexity of Acceptors for Prefix Codes 131
XI. Digital Signal Processing 143
  Using a Two-Dimensional Discrete Hilbert Transform to Factor Two-Dimensional Polynomials 143
  Recursibility of Two-Dimensional Difference Equations 151

XII. Linguistics 159
  The Semantics of Growth 159

XIII. Cognitive Information Processing 163
  Text-to-Speech Conversion 163
    Locally Organized Parser for Spoken Input 163

XIV. Communications Biophysics 169
  Animal Communication 169
    The Shaking Dance of Honeybee Workers: Evidence for Age Discrimination 169
