# Table of Contents

1. **Submicron Structures Technology and Research**
   - 1.1 Submicron Structures Laboratory .............................................. 1
   - 1.2 Microfabrication at Linewidths of 0.1 μm and Below ......................... 1
   - 1.3 Electronic Conduction in Ultra-Narrow Silicon Inversion Layers ............. 2
   - 1.4 Corrugated Gate MOS Structures .............................................. 2
   - 1.5 Submicron FET’s in Si .............................................................. 3
   - 1.6 Submicron-Gap High-Mobility Silicon Picosecond Photodetectors ............. 3
   - 1.7 Graphoepitaxy of Si, Ge, and Model Materials ................................. 4
   - 1.8 Zone-Melting Recrystallization of Si for Solar Cells .......................... 4
   - 1.9 Integration of Si and III–V Materials ......................................... 5
   - 1.10 Submicrometer-Period Gold Transmission Gratings for X-Ray Spectroscopy ....... 5
   - 1.11 High-Dispersion, High-Efficiency Transmission Gratings for Astrophysical X-Ray Spectroscopy ........................................ 5
   - 1.12 A Display Based on Switchable Zero Order Diffraction Grating Light Valves ...... 6
   - 1.13 Studies of Surface Acoustic Wave Propagation in Gratings ............... 7
   - 1.14 Near IR Grating Polarizers ...................................................... 7

2. **Kinetic Phenomena in Thin Film Electronic Materials**
   - 2.1 Surface-Energy-Driven Secondary Grain Growth in Ultrathin (<1000 A) Films of Silicon and Germanium .................................................. 9
   - 2.2 Metastable Phase Formation in Lithographically Defined Particles of Semiconductors ................................................................. 10
   - 2.3 Zone Melting Recrystallization of Silicon and Germanium Films ............... 10
   - 2.4 Graphoepitaxy of Si, Ge and Model Materials ................................ 11
   - 2.5 Properties of Grain Boundaries with Controlled Orientations and Locations in Thin Silicon Films ............................................................ 11
   - 2.6 Modeling of Grain Formation and Grain Growth in Thin Films .................. 12
   - 2.7 Modeling of Beading in Thin Films ............................................. 12
   - 2.8 Grain Growth in Thin Films and Thin Films Lines .............................. 12
   - 2.9 Electrical Properties of Interconnect Lines with Controlled Microstructures .......................................................... 13
   - 2.10 Kinetics of Silicide Formation at Refractory Metal-Silicon Contacts .......... 13

3. **Focused Ion Beam Fabrication**
   - 3.1 Focused Ion Beam System ....................................................... 15
   - 3.2 Connections Through Focused Ion Beam Milled Vias ......................... 15
   - 3.3 Mask Repair and Ion Assisted Deposition .................................. 16

4. **Chemical Reaction Dynamics at Surfaces**
   - 4.1 Dynamics of Molecular Chemisorption ....................................... 19
   - 4.2 Dynamics of Dissociative Adsorption ........................................ 20
   - 4.3 Chemical Reaction Dynamics by Molecular-Beam Surface Reactive Scattering .......... 20
   - 4.4 Spectroscopic Studies of Small Molecule Adsorption on Rare Earth Single Crystal Metal and Metal Oxide Surfaces ........................................ 21

5. **Optics and Quantum Electronics**
   - 5.1 Devices for High-Rate Optical Communications .............................. 23
   - 5.2 Picosecond Optics ................................................................. 27
   - 5.3 Ultrafast Pulse Generation .................................................... 28
   - 5.4 Femtosecond Spectroscopy .................................................... 29
   - 5.5 Diode Laser Dynamics and Diagnostics ................................... 30
   - 5.6 Quaternary (InGaAsP) Diagnostics .......................................... 31

---

RLE P.R. No. 127
6. **Infrared Nonlinear Optics**
   6.1 Infrared Nonlinear Processes in Semiconductors 33

7. **Phase Transitions in Chemisorbed Systems**
   7.1 Selenium Chemisorbed on the Nickel (100) Surface 35
   7.2 The Effect of Criticality on Wetting Layers 35
   7.3 Critical Behavior with Axially Correlated Random Bonds 36
   7.4 Duality and Pseudodimensional Variation in Potts Phase Transitions 36

8. **X-Ray Diffuse Scattering**
   8.1 Intercalation Compound Structures and Transitions 39
   8.2 Smectic Liquid Crystals 40
   8.3 Structures and Transitions of Monolayer Rare Gas Crystals 41

9. **Semiconductor Surface Studies**
   9.1 Chemisorption 43
   9.2 Structural Phase Transitions 45

10. **Electronic Properties of Amorphous Silicon Dioxide** 47

11. **Quantum Transport in Low Dimensional Disordered Systems**
   11.1 Variable Range Hopping in Quasi-One-Dimensional MOSFET’s 49

12. **Optical Spectroscopy of Disordered Materials**
   12.1 Studies of Micellar Liquid Crystals 51
   12.2 Properties of Colloidal Crystals 52

13. **Photon Correlation Spectroscopy and Applications**
   13.1 Structure and Dynamics of Colloidal Solutions Studied by Small Angle Neutron Scattering and Photon Correlation Spectroscopy 53

14. **Custom Integrated Circuits**
   14.1 Conversion of Algorithms to Custom Integrated Circuits 55
   14.3 Parallel Algorithms and Architectures for Solving Elliptic Partial Differential Equations 59
   14.4 Parallel Algorithms and Architectures for Computer Vision 59
   14.5 Very Large Scale Integrated Circuit Research 61
   14.6 A Circuit Theory for Digital VLSI Systems 62
   14.7 Waveform Bounding for Fast Timing Analysis of MOS VLSI Circuits 63

15. **Speech Communication**
   15.1 Speech Recognition
      15.1.1 Lexical Stress and its Application in Large Vocabulary Speech Recognition 68
      15.1.2 Detection of Nasalized Vowels in American English 69
      15.1.3 Lexical Access from Spectra (LAFS) 70
   15.2 Speech Synthesis 70
   15.3 Physiology of Speech Production
      15.3.1 A Pilot Experiment on Coarticulation and Trading Relationships between Tongue Position and Lip Protrusion to Accomplish the /s/-/S/ Contrast 72
      15.3.2 An Alternating Magnetic Field System for Tracking Articulatory Movements 72
      15.3.3 Acoustic Characteristics of Fricatives and Fricative Models 73
      15.3.4 Objective Assessment of Vocal Hyperfunction 73
      15.3.5 Laryngeal Modelling 74
   15.4 Speech Production Planning 74
   15.5 Studies of the Acoustics and Perception of Speech Sounds 76

RLE P.R. No. 127
Pump-Probe Technique
20.3 Atom–Field Interaction in Atomic Beams 122
20.4 Laser Raman Microwave Clock 123
20.5 Passive Resonator "Gyroscope" 125
20.6 Fiberoptic Ring Resonator "Gyroscope" 126
20.7 Long–Term Wavelength Stabilization of Broadband Semiconductor Light Sources 126
20.8 Linewidth Reduction and Stabilization of Single Frequency Semiconductor Lasers 127
20.9 Optical Phase Conjugation in a Ring Resonator 127

21. Atomic Resonance and Scattering 129
21.1 Resonant Multiphoton Ionization of Hydrogen 129
21.2 Atoms in Strong Magnetic Fields 130
21.3 Cavity Quantum Electrodynamics 132
21.4 Trapping of Neutral Atoms 133
21.5 High Precision Mass Measurement on Single Ions Using Cyclotron Resonance 134
21.6 Diffraction of an Atomic Beam by Transverse Standing Wave Laser Radiation 135
21.7 Vibrational Dependence of Rotational Rainbow Structure in Na₂–Ar 136
21.8 Vibrationally Inelastic Collisions 137

22. Plasma Dynamics 139
22.1 Tokamak Research: RF Heating and Current Drive 139
22.2 Nonlinear Wave Interactions — RF Heating and Current Generation in Plasmas 142
22.3 Physics of Thermonuclear Plasmas 153

23. Radio Astronomy 157
23.1 Galactic and Extragalactic Radio Astronomy 158
23.2 Jovian Decametric Radiation 159
23.3 Jovian Decametric Radiation 160
23.4 Long–Baseline Astrometric Interferometer 161
23.5 Tiros–N Satellite Microwave Sounder 161
23.6 High–Spatial–Resolution Passive Microwave Sounding Systems 162
23.7 Video Bandwidth Compression Techniques 163

24. Digital Signal Processing 165
24.1 Introduction 165
24.2 Improved Paraxial Methods for Modeling Underwater Acoustic Propagation 167
24.3 Signal Reconstruction from Fourier Sign Information 168
24.4 Knowledge–Based Pitch Detection 169
24.5 Bearing Estimation of Wideband Signals by Multidimensional Spectral Analysis 170
24.6 The Estimate–Maximize(E–M) Algorithm and its Application to Signal Processing Problems 171
24.7 Speech Synthesis from Short–Time Fourier Transform Magnitude Derived from Speech Model Parameters 172
24.8 Reconstruction of a Two–dimensional Signal from its Fourier Transform Magnitude 173
24.9 Motion Compensated Noise Reduction for Motion Video Scenes 173
24.10 Knowledge–Based Harmonic Source Detection and Direction Determination 174
24.11 Knowledge–Based Speech Analysis and Enhancement 175
24.13 Low Bit Rate Video Conferencing 177
24.14 The Curvature Spherical Image, a New Representation of 3–D Objects 177
24.15 Shallow Water Acoustic Inversion 178
24.16 Computing the Discrete Hartley Transform 179
