Executive Summary

What is the Purpose of this Report?

This document is an update to MIT Small Community Air Service White Paper No. 1—*Trends and Market Forces Shaping Small Community Air Service in the United States*¹. This report provides updated analysis and data appendices including 2013 schedule data. This will allow readers to investigate the continuing effects of U.S. airline capacity discipline and the changes in available domestic service at the 462 U.S. airports examined in the earlier report. As with the 2013 report, the data contained in this report has been sourced from Diio Mi.

How Has Available Domestic Air Service in the U.S. Changed Since 2012?

Our 2013 report on trends and market forces shaping small community air service in the U.S. showed that many smaller U.S. airports saw levels of available domestic flights and seats fall from 2007-2012 as a result of an economic downturn, high and volatile fuel prices, and a U.S. airline management strategy called “capacity discipline.” Through capacity discipline, airlines kept levels of domestic capacity growth low relative to historical levels despite a recovery in the U.S. economy. Capacity discipline has been in place in the U.S. since 2010, and the strategy has proved to be profitable as airlines removed economically unviable service and duplicate connectivity to secondary hubs.

As the data in this report’s appendices show, capacity discipline is still in full force in the United States. Scheduled domestic flights decreased by 1.1% from 2012-2013, while available seats (seat-departures) increased by 0.4% over the same period. This reflects a continuing trend of upgauging and an increase in average stage length as airlines continue to remove 50-seat regional jets from service. Figure 1 shows how available domestic seats and ASMs increased from 2012-2013, despite a 1.1% decrease in available departures over the same period.

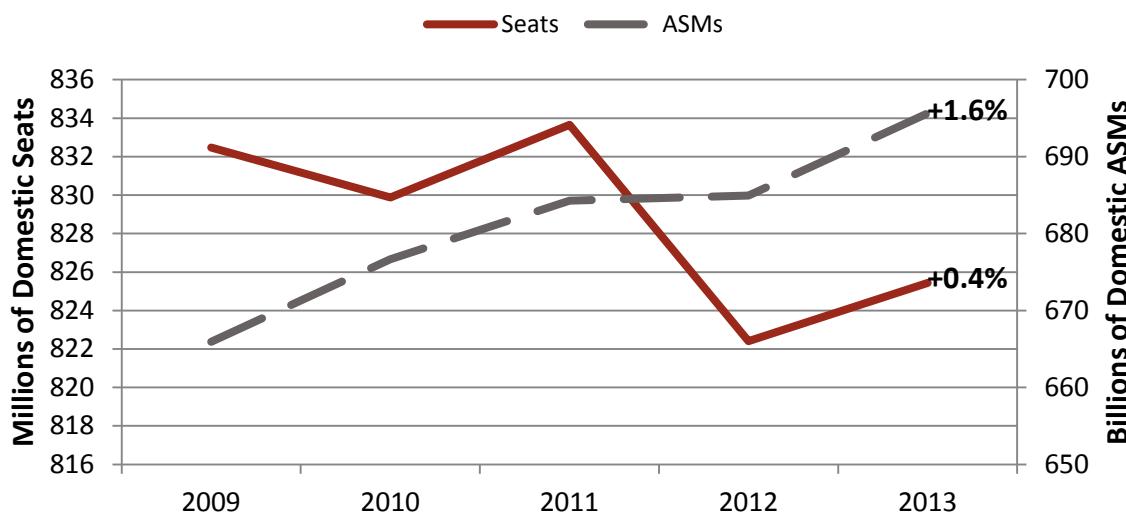

Figure 1: Changes in Domestic Seats and ASMs from 2009-2013 (Source: Diio Mi)

¹ Wittman, M.D. and W.S. Swelbar, MIT ICAT; Report No. ICAT-2013-02; May 2013

As was the case from 2007-2012, smaller airports continue to see larger reductions in scheduled domestic flights than larger airports. Table 1 shows the percent change in domestic flights by FAA airport hub type from 2012-2013; smaller airports² saw a 2.9% decrease in available flights over the last year, as compared to a 0.2% reduction at the 29 large-hub airports. In total, 61.1% of domestic departures at the U.S. originated at one of the 29 large-hub airports in 2013.

Airport Type	% change in domestic flights (2012-2013)	% change in domestic seats (2012-2013)
Large Hub	-0.2%	1.0%
Medium Hub	-2.1%	0.3%
Small Hub	-3.0%	-1.4%
Non-Hub and EAS ³	-4.2%	-2.5%
All Smaller Airports	-2.9%	0.6%
All Airports	-1.1%	0.4%

Table 1: Percent change in scheduled domestic flights by FAA hub type; 2012-2013 (Source: Diio Mi)

While network carriers continue to practice capacity discipline, reducing their scheduled domestic departures by 0.8% from 2012 to 2013, some LCCs started to cut capacity at a faster pace. Southwest Airlines and AirTran Airways reduced their joint scheduled departures by 4.0% from 2012-2013. Although JetBlue Airways saw a 5.5% increase in departures over the same period, and Frontier Airlines saw a significant reduction in scheduled service as the airline transitioned to an ultra-low-cost carrier (ULCC) business model. Established ULCCs saw significant growth in departures on the order of 10.4% from 2012-2013, but these carriers are still only a small part of the U.S. domestic market. ULCCs departures represented only 1.4% of the available domestic capacity in the United States in 2013.

Among large- and medium-hub airports, the majority of airports saw reductions in available capacity. As Figure 2 shows, 38 airports saw decreases in departures from 2012-2013, whereas 24 airports saw departure growth.

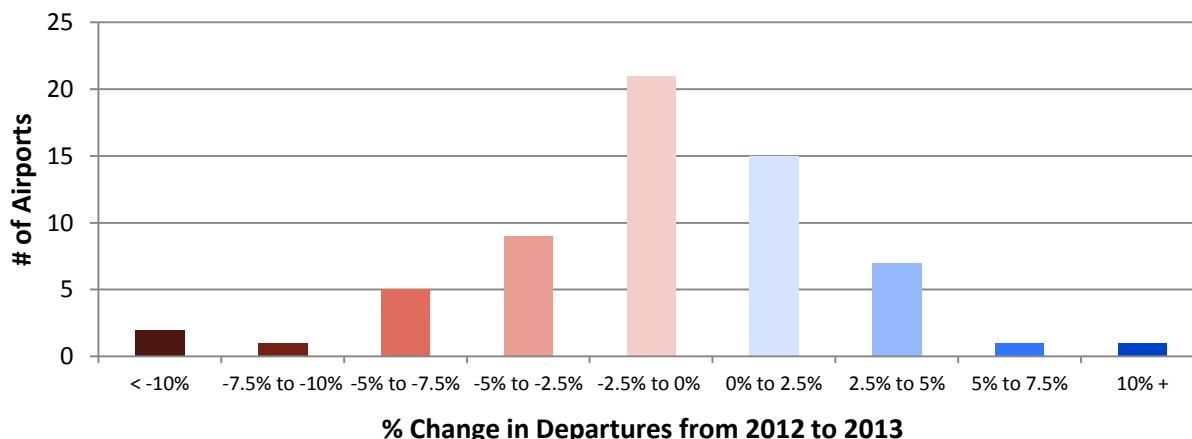

Figure 2: % Change in Available Domestic Departures among Large- and Medium-Hub Airports, 2012-2013

² We define “smaller airports” as airports classified as FAA medium-hubs or below.

³ EAS refers to Essential Air Service, a federal subsidy program that provides funding for service at rural airports.

Among large-hub and medium-hub airports, Table 2 shows the ten airports that saw the largest increases and decreases in available capacity from 2012 to 2013. Much of the capacity growth during the last year was in Texas, with DFW, HOU, and AUS all showing departure growth of at least 4%. New Orleans International Airport (MSY) continued its strong growth and has emerged as a winner from the capacity discipline period. Meanwhile, several previous AirTran hubs, BWI and MKE, saw decreases in available departures over the last year. Memphis International Airport (MEM) saw the largest decrease in departures as Delta Air Lines ceased hub operations at that airport.

Airport	2012 Flights	2013 Flights	% Change in Flights	% Change in Seats
MSY : New Orleans Intl	43,723	48,802	11.6%	11.4%
HOU : William P Hobby	56,103	59,294	5.7%	8.4%
DFW : Dallas/Ft Worth Intl	288,002	301,155	4.6%	2.8%
AUS : Austin-Bergstrom Intl	48,434	50,481	4.2%	4.6%
RSW : Southwest Florida	31,465	32,425	3.1%	3.2%
OMA : Eppley Airfield	27,007	25,429	-5.8%	-0.9%
BWI : Baltimore/Wash Intl	114,371	107,008	-6.4%	-1.0%
ABQ : Albuquerque Intl	34,485	31,283	-9.3%	-6.2%
MKE : General Mitchell Fld	48,171	41,274	-14.3%	-10.7%
MEM : Memphis Intl	58,263	39,822	-31.7%	-28.0%

Table 2: Large- and medium-hub airports with the largest changes in capacity 2012-2013 (Source: Diio Mi)

At smaller airports, network carriers continue to remove mainline aircraft and shift service predominantly to regional carriers. At smaller airports, 88% of United flights, 84% of US Airways flights, 71% of Delta flights, and 69% of American flights were operated by regional aircraft in 2013. However, the 37-50 seat regional jet continues to be removed from small airport service. As shown in Figure 3, Delta Air Lines reduced its use of small RJs at smaller airports by 12.7% over the last year alone. United and American will likely follow suit in 2014. Some of this service is being replaced by larger 76-seat regional jet flights, but much of this scheduled service to smaller communities is being removed entirely.

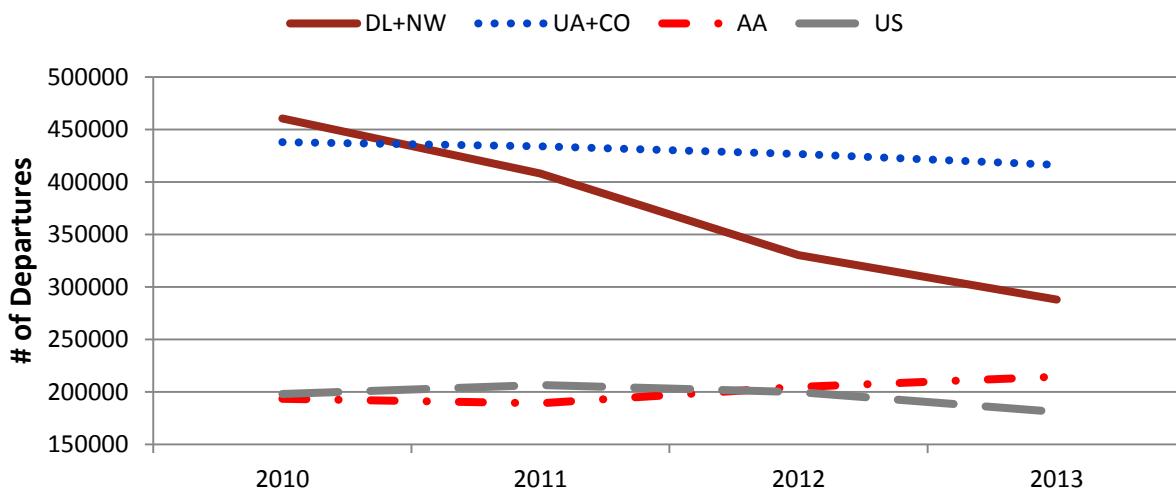

Figure 3: Scheduled 37-50 Seat RJ Departures at Smaller Airports, 2012-2013 (Source: Diio Mi)

What Capacity Trends Should We Be Watching for 2014?

Capacity discipline is certainly here to stay in the United States in the short term. Increases in unit costs and the current success of the capacity discipline strategy in generating stable profitability have induced airlines to keep projected capacity growth low over the next year. Any net capacity growth will likely come at “battleground” airports such as SEA, SLC, LAX, HOU, and DAL, as airlines continue to bolster domestic feed for enhanced international operations at large airports. We do not expect to see any network carrier or LCC increase domestic departures by more than 6% in the coming year. Although ultra-low-cost carriers like Spirit, Frontier, and Allegiant may see more significant growth, these airlines represent only a small fraction of the domestic market.

Although U.S. airlines are currently practicing system-wide capacity discipline, competitive pressures are causing changes in service at many individual airports. As such, there are a series of regional and airline-specific domestic capacity trends that bear watching for the remainder of 2014:

- Fallout from AA/US slot divestitures at LGA and DCA, and impacts on airlines receiving those slots;
- Liberalization and growth at DAL (and loss of existing service in smaller airports in Texas and nearby states) following the expiration of the Wright Amendment;
- Delta-Alaska competitive relationship and capacity growth at SEA and SLC;
- Effects of a pilot shortage on regional and ultra-regional carriers in the smallest markets;
- Rationalization of the combined AA/US schedule as the combined carrier completes the merger; and
- Competitors picking up the leftovers at former network carrier hubs.

Each of these trends could continue to affect growth in capacity at local markets, and airport officials will need to pay attention to those trends that could affect their region. However, on the whole, capacity growth will likely be modest over the next year. Airlines continue to carefully deploy their available capacity and target only those operations that will be likely to turn a profit. Small airports will likely continue to need the support of incentive packages to induce new service or, in some cases, maintain existing service. Removal of 50-seat jets in small markets will certainly continue and likely spread to all carriers, although maintenance cost incentives will likely keep these aircraft in operation.

In sum, while some domestic markets will show minor growth, the general attitude among U.S. carriers is a focus on international expansion with limited new domestic activity. As such, we expect capacity discipline to remain in effect domestically in the U.S. at least through 2015.

Acknowledgements

The author would like to thank Peter Belobaba, William Swelbar, and the members of the MIT Airline Industry Consortium for financial support and for helpful comments on earlier drafts of this work. All opinions are those of the author.

Appendix A: Summary of Scheduled Domestic Capacity for Large Hub Airports

Notes: Tables show enplaned passengers (2012 data), as well as scheduled domestic departures and available seats at each airport for the years 2012 and 2013. Departures, seats, and airline service data were sourced from Diio Mi. Enplaned passenger data sourced from the Federal Aviation Administration Passenger Boarding and All-Cargo Data for U.S. Airports. All FAA hub definitions are current as of May, 2014.
