

## 9.14 Class #4

Butler, AB and Hodos, W., handout "Appendix: Terms used in neuroanatomy", *Comparative Vertebrate Neuroanatomy*. New York: Wiley-Liss, 1996 [given in first class]. You should know the meaning of all the marked terms by the end of the term, and it would be useful if they were known much earlier.

Review the last two pages of the notes by Sonal Jhaveri [given in first class]. **You should know the names of all the cranial nerves**, their order, and be able to tell whether each is a sensory, a motor, or a mixed nerve.

Homework assignment: a crossword puzzle, which covers terms you should be learning in these initial sessions.
