

The value for enthalpy of melting given for problem 3 in the problem set was incorrectly given as 129,580 J/mole- it is actually 13,400 J/mole (the larger value is the enthalpy of vaporization). The problem 3 solution given in the 'graded problems' file on the section page, used the correct value of 13,400 J/mole for the enthalpy of melting. The addendum solves the problem using the enthalpy of melting given in the problem set (129,580 J/mole).
