

IM/S Spring 2006  
Problem Set 3, part 1

This is the assignment from the CF lecture notes. The problem begins on page 42, section 5.2.4. The part you need to do is at the end, page 46.

The supplementary MATLAB dam code uses finite elements, and can be used to do this problem. You should edit the constants.m file to change the number of elements. (The variable N in particular.)
