Introduction	1
Personnel	11
Publications and Reports	1v
Research Projects	
I. Physical Electronics	1
A. Electron Emission Problems	1
1. Thermionic Emission from Sintered Cathode of Thoria and Tungsten Mixture	1
2. Studies on Oxide-Coated Cathodes. Correlation of Pulsed and D-C Emission and Decay of Pulsed Emission	2
3. Work Functions and Conductivity of Oxide- Coated Cathodes	3
4. Electron Emission under Retarding and Accelerating Fields	3
5. Determination of the Thermionic Emission Properties of Single Tungsten Crystals by a Photometric Method	4
B. Properties of Cathode-Ray Tube Screens	5
C. Gas Discharges	5
1. Langmuir Probe Measurements in the Mercury Arc Operating in the Transition Range Between Low and High Pressures	5
D. Experimental Techniques	6
1. Spectral Emissivity of Tungsten	6
2. Study of Vacuum Technique as Indicated by a New Type of Ion Gauge	7
II. Microwave Gaseous Discharges	9
III. Solid State Physics	19
A. Properties of Matter at Low Temperatures	19
1. Helium Liquefiers	19
2. Surface Impedance of Tin	20
3. Resistivity of Normal Conductors	21
4. Low-Temperature Velocity Measurements of Second Sound	21
5. Mechanical Excitation of Second Sound in Liquid Helium	22
6. Phosphor Bronze Wires	23
7. Transfer of Liquid Helium	23
B. Properties of Matter at Ultrasonic Frequencies	24
C. Classification of Phase Transitions	24
IV. Radio-Frequency Spectroscopy	25
A. Molecular-Beam Research	25
1. Hyperfine Structures and Nuclear Quadrupole Moments of Cl ³⁵ and Cl ³⁷	25
2. Hyperfine Structure of Na ²²	27
3. Electron Multiplier for Ion Detection	28
4. Detection of Aluminum and Boron Atoms	28
5. Second Molecular-Beam Apparatus	28
6. Third Molecular-Beam Apparatus	28

IV.	B.	Magnetic Nuclear Resonance	29
		1. Deuteron-Proton Magnetic Moment Ratio	29
		2. Rotational States in Solids	30
		3. Circuit Improvement	31
	C.	Paramagnetic and Ferromagnetic Resonance	
		Absorption at Microwave Frequencies	32
	D.	Microwave Spectroscopy	34
		1. Microwave-Frequency Bridge	34
		2. Sweep Spectrometers	34
		3. Cavity Spectroscope	35
		4. Five-Mm Sweep Spectroscope	35
		5. Three-Mm Sweep Spectroscope	36
		6. Hyperfine Splitting of Atomic Hydrogen	36
V.		The Linear Accelerator Program	38
VI.		Magnetron Development	39
	A.	Ten-Megawatt Magnetron	39
	B.	Ceramic Windows	39
	C.	Thoria Cathodes	40
	D.	Mode Selection	40
	E.	R-F Build-up Time	40
	F.	Noise Generation in the Pre-oscillating Magnetron	41
VII.		Traveling-Wave Tubes	42
	A.	Three-Cm Traveling-Wave Amplifier Tubes	42
	B.	Seven-Mm Traveling-Wave Oscillator	42
VIII.		Communications Research	44
	A.	Pulse Modulation Studies	44
	B.	Multipath Transmission	45
	C.	Microwave Modulation Techniques	46
	D.	Communications and Noise Theory	48
		1. Autocorrelation Function: Electronic Correlator	48
		2. Optimum Prediction	48
		3. Random Noise	49
		4. Amplitude Probability Distributions	50
		5. Information Theory	52
		6. Effects of Transit Angle on Shot Noise in Vacuum Tubes	52
	E.	Transient Problems	53
		1. Envelope Studies	53
		2. Transient Theories	53
		3. Response of Networks to Frequency Transients	54
	F.	Active Networks	54
		1. General Theory	54
		2. Broadbanding of Amplifiers by the Use of Active Elements in the Interstage	55
	G.	Higher Mode Problems	58
		1. Steady-State Propagation of Electromagnetic Waves along Cylindrical Structures	58
		2. Transmission Through Large Metallic Waveguides	61
	H.	Locking Phenomena in Microwave Oscillators	62
IX.		Miscellaneous Problems	63
	A.	Electronic Differential Analyzer	63
	B.	An Automatic Impedance Analyzer	68
	C.	Proton-Velocity Meter	70
	D.	Electronic Potential Mapping	71
	E.	Physical Limitations of R-F Radiating Systems	71
	F.	Mathematical Problems	72
	G.	The Scattering of Electromagnetic Waves. Matrix Methods	72
