TABLE OF CONTENTS

Publications and Reports v

Personnel vi

Introduction viii

I. Physical Electronics 1

A. Electron-Emission Problems 1
1. Work Function and Electrical Conductivity of Oxide-Coated Cathodes 1
2. Determination of the Thermionic-Emission Properties of Single Tungsten Crystals by a Photometric Method 1
3. Determination of the Field-Emission Properties of Single Tungsten Crystals by a Photometric Method 2

B. Studies With Gaseous Discharge 3
1. Hot-Cathode Arc in Cesium Vapor 3

C. Experimental Techniques 5
1. Spectral Emissivity of Tungsten and Tantalum 5
2. Ionization Gauge and High-Vacuum Studies 5

II. Microwave Gaseous Discharges 6

A. Microwave Breakdown in Hydrogen 6
B. Measurement of the Ratio of D/μ for Electrons 7
C. Effect of Magnetic Field on High-Frequency Breakdown 9
D. Dielectric Coefficient of Plasmas 12

III. Solid State Physics 15
A. Phase Transitions 15
B. Vacuum Spectrograph 16
C. Theory of Liquid Helium 16

IV. Low-Temperature Physics 17

A. Helium Liquefiers 17
B. Clear Dewars 17
C. Microwave Surface Impedance of Conductors 18
D. Microwave Surface Impedance of Superconductors 18
E. Magnetic Cooling 20
F. Elastic and Inelastic Behavior of Metals at Low Temperatures 21
G. X-Ray Structure of Superconductors 21

V. Radio-Frequency Spectroscopy 22

A. Molecular-Beam Research 22
1. Hyperfine Structures and Nuclear Quadrupole Moments of the Halogens 22
2. The Hyperfine Structure and Quadrupole Moment of Al^{27} 22
3. Third Molecular-Beam Apparatus 22
4. Theory of Nuclear Effects in Microwave Spectra 22
5. Theory of Nuclear Electric Quadrupole Moments 23
6. The Nuclear Spin and Magnetic Moment of Na^{22}, Cs^{137} 23
7. The Nuclear Spin and Magnetic Moment of Cs^{137} 23
8. The Fourth Atomic-Beam Apparatus 23

B. Magnetic Nuclear Resonance 23
1. Nuclear Resonances at Low Temperatures 23
2. The Optical Detection of R-F Resonance 24
3. Deuteron-Proton Moment Ratio 24

C. Paramagnetic Relaxation 25
1. Resonance Absorption 25
2. Absorption in the Absence of a Static Magnetic Field 25

D. Microwave Spectroscopy 26
1. Hyperfine Structure of Atomic Hydrogen 26
2. Germane Monochloride and Dimethyl Telluride 27
3. Mercurous Chloride 27

4. Ketene, Formaldehyde, and Water 27
5. Oxygen 27
6. Slow-Sweep Spectroscope 28

VI. The Linear-Accelerator Program 29

VII. Magnetron Development 31

A. High-Power 10.7-Cm Magnetron 31
1. Testing and Design 31
2. Thoria Cathodes 32
3. Auxiliary Equipment 33
a. 20-Megawatt Pulse Transformer 33
b. New Vacuum System 33
c. 20-Megawatt Modulator 34
B. Magnetron Research 35
1. Mode Stability 35
2. Noise Properties of the Pre-Oscillating Magnetron 35

VIII. Traveling-Wave Tubes 36
A. Three-Cm Traveling-Wave Amplifier Tubes 36
B. Velocity-Modulated-Input Traveling-Wave Amplifier Tube 36
C. Low-Voltage Three-Cm Traveling-Wave Amplifier Tube 37
D. Dense Electron Beams in an Axial Magnetic Field 39

IX. Communications Research 40

A. Multipath Transmission 40
1. Speech and Music 40
2. Television 42
B. Microwave Modulation Techniques 44
1. Double-Tuned Oscillators 44
2. Frequency Modulation of a Reflex Klystron 46
3. Magnetron Reactance Tube 47
C. Statistical Theory of Communication 47
1. Auto-Correlation Function 47
a. Correlation Functions 47
b. Auto-Correlation Functions of Random Noise 50
c. Digital Electronic Correlator 52
2. Amplitude and Conditional Probability Distributions 52
3. Optimum Prediction 54
4. Pulse Modulation Studies 55
5. Storage of Pulse-Coded Information 55
6. "Felix" (Sensory Replacement) 57
a. Bank Filters With Variable Bandwidths 57
7. Low-Frequency Output Spectrum of Lock-In Amplifier 57
8. Clipped-Speech Studies 58
9. Pulse-Code Magnetic Recorder 58
D. Transient Problems 59
1. Transient Theories 59
2. Synthesis of Networks for Specific Transient Response 65
3. Response of Networks to Frequency Transients 67
E. Active Networks 67
F. Higher Mode Problems 69
1. Steady-State Propagation of Electromagnetic Waves Along Cylindrical Structures 69
2. Techniques for Millimeter-Wave Transmission 69
G. Locking Phenomena in Microwave Oscillators 70

X. Miscellaneous Problems 71

A. Electronic Differential Analyzer 71
B. An Automatic Impedance-Function Analyzer 74
C. Proton-Velocity Meter 75
D. Electronic-Potential Mapping 75
E. The Generation of Millimeter and Infrared Radiation Accelerated Electrons 75
