

TABLE OF CONTENTS

Publications and Reports	v
Personnel	vii
Introduction	ix
I. Physical Electronics	1
A. Electron-Emission Problems	1
1. Thermionic Work Function and Conductivity of Oxide-Coated Cathodes	1
2. Thermionic Emission from Ultrafine-Grain Oxide-Coated Filaments	2
3. Deterioration of Oxide-Coated Cathodes under Low Duty-Factor Operation	3
4. Purified Standard Diodes	7
5. Determination of the Field-Emission Properties of Single Tungsten Crystals by a Photometric Method	8
6. Photoelectric Emission	9
7. Effect of Impurity Surface States on the Photoelectric Threshold in Semiconductors	10
B. Studies with Gaseous Discharge	11
1. Investigation of Low-Pressure Mercury Arcs	11
C. Experimental Techniques	12
1. Spectral Emissivity of Tungsten	12
2. The Voltage Comparator Tube	13
II. Microwave Gaseous Discharges	17
A. 100-Megacycle Breakdown	17
B. Measurement of the Properties of Low-Density Microwave Gas Discharges	19
III. Solid State Physics	22
A. The Theory of Superconductivity	22
B. Soft X-Ray Vacuum Spectrograph	22
C. Paramagnetic Resonance Experiments	23
D. The Influence of a Magnetic Field on the Conductivity of Thin Metallic Films	23
E. The Theory of the Transport Phenomena in Metals	24
IV. Low-Temperature Physics	26
A. Helium Liquefiers	26
B. Second Sound Velocity	26
C. X-Ray Study of Superconductors	28
D. Investigation of Dipole Interaction Theory in Crystals	28
E. Cooling Liquid Helium by Adiabatic Demagnetization	28
V. Radio-Frequency Spectroscopy	30
A. Molecular-Beam Research	30
1. The Fourth Atomic-Beam Apparatus	30
B. Nuclear Magnetic Resonance	31
1. Factors Influencing the Positions of Nuclear Magnetic Resonances	31
2. Deuteron-Proton Moment Ratio	35
C. Microwave Spectroscopy	35
1. Formaldehyde	35
2. Oxygen	37
3. Tellurium	38
4. Sulphur	38
5. Methyl Stannane	38
6. Nuclear Spin of B ¹⁰	39
7. Apparatus	41

VI.	The Linear-Accelerator Program	41
VII.	Tube Research and Development	42
	A. Magnetron Development	42
	1. High-Power 10.7-Cm Magnetron	42
	a. Testing and design	42
	b. Thoria cathodes	42
	c. Auxiliary equipment	43
	2. Magnetron Research	43
	a. Mode interaction in magnetrons	43
	b. Noise properties of the pre-oscillating magnetron	44
	3. Cathode Research	45
	B. Traveling-Wave Tubes	47
	1. Theoretical Noise Figure of Traveling-Wave Tubes	47
	a. Experimental work	49
	2. Microwave Noise Studies	49
	3. Dense Electron Beams in Axial Magnetic Fields	49
	C. The Generation of Millimeter and Infra-Red Radiation by Accelerated Electrons	52
VIII.	Communications Research	53
	A. Multipath Transmission	53
	1. Speech and Music	53
	a. Theory	53
	b. Limiter design	54
	c. Three-path multipath interference	56
	2. Television	56
	B. Statistical Theory of Communication	58
	1. Digital Electronic Correlator	58
	2. Detection of Small Signals in Noise	58
	3. Crosscorrelation Demonstrator	58
	4. Experimental Determination of System Functions by the Method of Correlation	60
	5. Optimum Linear System Design Criteria	61
	6. Application of Wiener's Techniques in Transient Synthesis	62
	7. Techniques of Optimum Filter Design	64
	8. Amplitude and Conditional Probability Distributions of a Quantized Time Function	66
	9. Storage of Pulse-Coded Information	67
	10. Felix (Sensory Replacement)	67
	11. Response of Nerve to Random Stimuli	67
	12. Speech Studies	68
	a. A short-time correlator for speech waves	68
	b. Speech synthesizer	70
	c. The effect of syllabic rate on speech intelligibility	70
	13. Pulse Coding of Picture Signals	72
	14. Pulse-Code Magnetic Recorder	73
	15. Twin-Track Recorder for Slow Phenomena	75
	C. Transient Problems	75
	1. Transient Theories	75
	D. Active Networks	85
	1. Broadband Amplifiers	85
	2. The Synthesis of Servomechanisms	86
	E. Locking Phenomena in Microwave Oscillators	88
	1. Theory	88
	2. Experimental Work	89
IX.	Miscellaneous Problems	90
	A. Electronic Differential Analyzer	90
	B. Analog Devices for Network Problems	91
	1. An Automatic Impedance-Function Analyzer	91
	2. The Electronic Isograph	93
	a. Theory	93
	b. Design	93
