

TABLE OF CONTENTS

Personnel	vi
Publications and Reports	ix
Introduction	xi
I. Physical Electronics	1
Research Objectives	1
Electron Emission Problems	1
Reflection of Slow Electrons at a Metal Surface	1
Experimental Studies	2
High-Vacuum MassITron	2
The Spectral Emissivity of Tungsten	3
Cleanup of Helium in Ionization Gauges	4
Ionization Gauge Control Circuit	5
II. Microwave Gaseous Discharges	8
Research Objectives	8
High-Density Microwave Gaseous Discharges	8
Microwave Determination of the Probability of Collision of Slow Electrons in Neon	9
III. Solid State Physics	13
Electrical Breakdown in Germanium at Microwave Frequencies	13
IV. Low Temperature Physics	14
Research Objectives	14
Measurement of the Thermodynamic Equation of State of Paramagnetic Salts	14
V. Microwave Spectroscopy	18
Research Objectives	18
VI. Magnet Laboratory Research	19
Research Objectives	19
Nuclear Orientation in Mercury Vapor	19
Stepwise Excitation in Mercury	19
Nuclear Resonances in Solids	20
VII. Microwave Tube Research	21
Research Objectives	21
Minimum Noise Figure of Longitudinal Beam Amplifiers	21
Low-Noise Electron Beams	26
Beam Noise Measurements	29
Million-Electron-Volt Tube	30
VIII. Atomic Beam Research	31
Research Objectives	31
Electron Multipliers	31
Precision Measurements of the Hyperfine Levels of Cs ¹³³	31

	Stark Effect on Hyperfine Structure	32
	Hyperfine Structure of the $^2P_{1/2}$ State in Ga ⁶⁹ and Ga ⁷¹	32
	Hyperfine Structure of Halogens	32
IX.	Stroboscopic Research	34
	Research Objectives	34
	Characteristics of the FT-17A Flashtube	34
X.	Statistical Communication Theory	43
	Research Objectives	43
	A Theorem Concerning Noise Figures	43
	Calculation of Second-Order Correlation Functions	45
	Measurement of Second-Order Autocorrelation Functions	49
	Autocorrelation Functions of Poisson Waves	56
XI.	Processing and Transmission of Information	63
	Research Objectives	63
	The Synthesis of Iterative Switching Circuits	63
	Sequential Switching Systems with Closed Memory	67
XII.	Transistor Circuits	72
	Research Objectives	72
	Constant Resistance AGC Attenuators for Transistor Amplifiers	72
	The Operations of Multiplication and Division	77
XIII.	Semiconductor Noise	78
	Research Objectives	78
	A Theory of 1/f Noise in Semiconductor Filaments	79
	Role of Surface Oxide Layers in 1/f Noise	89
XIV.	Speech Analysis	92
	Research Objectives	92
XV.	Mechanical Translation	93
	Research Objectives	93
	Syntactic Categories	93
XVI.	Visual Replacement Projects	96
	Research Objectives	96
	Combined Step-Down and Obstacle Detector	96
XVII.	Communications Biophysics	99
	Research Objectives	99
	Physiological and Psychological Constraints upon Auditory Theory	100
XVIII.	Neurophysiology	101
	Research Objectives	101
XIX.	Analog Computer Research	102
	Research Objectives	102
	Active Network Synthesis	102
	Network Synthesis with Distributed Elements	108

	Piecewise Linear Network Theory	108
XX.	Network Synthesis	113
	Research Objectives	113
XXI.	Multipath Transmission	114
	Research Objectives	114
	Cascaded Bandpass Limiters	114
	Narrow-Band Limiting	117
