

## TABLE OF CONTENTS

Personnel		v
Publications and Reports		viii
I.	Physical Electronics	1
	Electron Emission Problems	1
	Importance of Porosity in Maintaining High-Current Density from Oxide Cathodes	1
	Reflection of Slow Electrons at a Metal Surface	3
	Physical Electronics in the Solid State	3
	Studies of Surface Phenomena in Germanium	3
	Gas Discharges	3
	Ion Generation and Electron Energy Distributions	3
	Experimental Techniques	5
	High Vacuum Studies: The MassITron	5
	Spectral Emissivity of Tungsten	6
	Cleanup of Helium in Ionization Gauges	6
	Ionization Gauge Studies	7
II.	Microwave Gaseous Discharges	10
	High-Density Microwave Gaseous Discharge	10
	Plasma Oscillations	11
III.	Solid State Physics	13
	Electrical Breakdown in Germanium at Microwave Frequencies	13
IV.	Microwave Spectroscopy	14
	Molecular-Beam Microwave-Absorption Spectroscope	14
	Phase Stabilization of Microwave Oscillators	14
	Excited Torsional States in Asymmetric Hindered Rotors	15
	Paramagnetic Resonance	15
V.	Nuclear Magnetic Resonance and Magneto-Optics	16
	Hyperfine Structure of the $^3P_1$ Level of Mercury	16
	Nuclear Magnetic Resonances in Gases	16
	Optical Properties of Atomic Vapors	17
VI.	Microwave Electronics	18
	A Kinetic Power Theorem for the Transverse Field Tube	18
	Interception Current Noise Measurements	22
VII.	Multipath Transmission	24
	Cascaded Bandpass Limiters	24
VIII.	Statistical Communication Theory	29
	A Theorem Concerning Noise Figures	29
	Second-Order Correlation Functions	31
	Properties	31
	Calculations	34

	Measurements	36
	Some Properties of Experimental Autocorrelation Functions	38
	Measurement of Industrial Process Behavior	42
IX.	Processing and Transmission of Information	47
	Entropy of Printed English	47
	Bounds to the Entropy of Television Signals	49
	Measuring Second-Order Probability Distributions by Digital Means	52
	Coding for Noisy Channels	54
	Linear Binary Sequence Filters	59
	Procedure for the Minimization of Switching Functions	61
	A Theorem on Feedback in Sequential Switching Circuits	62
X.	Transistor Circuits	65
	Constant-Resistance AGC Attenuators for Transistor Amplifiers	65
	The Operation of Multiplication	66
	The Process of Time Integration	68
XI.	Semiconductor Noise	71
	Modification of Noise Analyzer	71
	Equipment for Noise Amplitude Probability Distribution Measurements	71
XII.	Speech Analysis	74
	Set of Highpass and Lowpass Filters	74
XIII.	Communications Biophysics	75
	Amplitude Variability of $N_1$ ; Comparison with the Model	75
	Evoked Responses to Clicks in Relation to On-Going Cortical Activity	76
	Analog Correlator for Electroencephalography	77
	Measurements of Correlator Accuracy	77
	Correlation Studies of Brain Potentials	79
XIV.	Neurophysiology	83
XV.	Nonlinear Circuits	85
	Research Objectives	85
	Diode Circuit Characteristics	85
	Piecewise Linear Network Theory	89
	A Piecewise-Planar Multiplier	93
	An Electronic Vector Magnitude Circuit	95
XVI.	Network Synthesis	97
	Determination of Root Loci from Saddlepoint Considerations	97
	Complexity of Grounded Networks Having Zeros of Transmission in the Right Half-Plane	98
