

TABLE OF CONTENTS

Personnel		vi
Publications and Reports		x
Introduction		xiii
I.	Physical Electronics	1
	Physical Electronics in the Solid State	1
	Characteristics of Junctions in Germanium	1
	Surface States on Semiconductors	2
	Electroluminescence	2
	Electron Emission Problems	3
	Effect of a Magnetic Field and of a Unidirectional Heating Current on Thermionic Emission from Molybdenum	3
	Experimental Techniques	3
	Low-Pressure Measurements	3
	Electrometer for Currents down to 10^{-12} amp	4
	Photoelectrons Produced by Soft X-rays	4
	Pressure Computation from McLeod Gauge Measurements	5
II.	Microwave Gaseous Discharges	8
	"Multipacting" in a Magnetic Field	8
	Probe Measurements in Coaxial Geometry	11
	Measurement of the Collision Cross Section and of the Energy Loss of Slow Electrons in Hydrogen	14
	Zero-Shift Method for Measuring the Frequency of Collision of Electrons in Gases	18
III.	Solid State Physics	22
	Recombination of Electrons and Donors in Germanium	23
IV.	Microwave Spectroscopy	27
	Ammonia Maser	27
	Paramagnetic-Resonance Spectrometer	28
	Versitron 180°-Pulse Technique	28
	Solid-State Quantum-Mechanical Amplifier	33
	Gadolinium Ethyl Sulphate Spectrum	33
V.	Nuclear Magnetic Resonance and Hyperfine Structure	35
	Atomic-Beam Light Sources	36
	Hyperfine Structure of the P State of Mercury by Double-Resonance Methods	39

CONTENTS

VI.	Microwave Electronics	40
	Low-Q Output Cavity for Hollow-Beam Klystrons	41
	Propagation in a Circular Waveguide Loaded with a Nondrifting Plasma	42
	Power Relations in Parametric, Nonlinear Media	49
	Mode Coupling in a Periodically Loaded Transmission line	50
VII.	Atomic Beams	55
	Hyperfine Structure of Bromine	56
	Linear Decelerator for Molecules	56
	Measurement of the Velocity of Light	57
	Stabilization in Klystron Phase-Locked Oscillator Loops	59
	Resonance Detector: Velocity of Light Experiment	61
VIII.	Stroboscopic Research	64
IX.	Frequency Modulation	65
	Condition for Quasi-Stationary Response	65
X.	Statistical Communication Theory	68
	The Invariance Property of Correlation Functions under Nonlinear Transformations	68
	Saddlepoint Method of Integration	73
	Expansions for Some Second-Order Probability Distributions	81
XI.	Process Analysis and Synthesis	85
XII.	Processing and Transmission of Information	86
	Solvability Criterion for Simultaneous Logical Equations	87
	Zero Error Capacity for List Detection	88
	List Decoding	90
	Picture Processing	95
	Algebraic Decoding for the Binary Erasure Channel	100
XIII.	Transistor and Diode Studies	104
XIV.	Noise in Electron Devices	105
	Noise Performance of Parametric, Longitudinal-Beam Amplifiers	105
	Network Optimization of Maser Noise Performance	106

CONTENTS

XV.	Statistical Thermodynamics	109
	Second Phase Rule and Superfluidity	109
XVI.	Speech Analysis	112
	Study of Intonation	112
XVII.	Mechanical Translation	116
	On Characterization of Finite-State Languages	116
XVIII.	Communications Biophysics	119
	Detection and Masking of Beats in Repeated Bursts of Tone	120
	Time Course of Adaptation of Evoked Responses from the Cat's Somesthetic and Auditory Systems	121
	Studies of the Auditory Nervous System by Using Combined Acoustic and Electric Stimulation	124
	Relation of Intrinsic Alpha Activity to Rhythmic Activity Induced by Photic Stimulation in Man	128
	Study of EEG Characteristics by Means of a Digital Computer	134
	Vacuum Spring Electrodes	134
XIX.	Neurophysiology	137
	Vision in the Frog	137
	Membrane Properties in Nerve	146
	A New Cathode Follower	146
XX.	Circuit Theory	149
	Network Topology	149
	Parametric Amplification	150
	A Simple Example of Nonlinear Filtering	150
	Thermal Integrating Multiplier	151
XXI.	Network Synthesis	155
XXII.	Microwave Theory	156
	Cascading of Bilateral, Two-Port Networks by Means of the Schilling Figure	156
	Noise-Power Ratio Transformations in Three-Dimensional Spaces	157
	Noise Transformations in Four-Dimensional Spaces	159
XXIII.	Mathematics	165
	On Binary Relations	165
