Timbre perception

- **Timbre: tonal quality** (≠ pitch, loudness, duration or location)
- Defines separate voices, musical coloration
- Multidimensional space: not completely well understood
- Two general aspects: spectrum & dynamics
- Stationary spectrum
  - Spectral center of gravity - "brightness"
  - Formant structure;
  - Harmonicity
- Amplitude-frequency-phase dynamics
  - Amplitude dynamics (attack, decay)
    - amplitude modulation (roughness)
  - Frequency dynamics
    - relative timings of onsetsand offsets of partials
    - frequency modulation (vibrato)
  - Phase dynamics (noise, phase coherence, chorus effect)
- Analogy with phonetic distinctions in speech
    - Vowels (stationary spectra; formant structure)
    - Consonants (dynamic contrasts: amplitude, frequency & noise)
- Temporal integration windows and timbral fusion
- Some neural correlates

Timbre ~ sonic texture, tone color

Please see Paul Cezanne, Apples, Peaches, Pears, and Grapes c. (1879-80); Oil on canvas, 38.5 x 46.5 cm; The Hermitage, St. Petersburg at (http://www.ibiblio.org/wm/paint/auth/cezanne/sl/)

Timbre ~ sonic texture, tone color

Texture
Roughness

Stationary and dynamic factors in timbre perception

- **Periodicity (noise-like or tone-like)**
  - Harmonicity (is this properly an aspect of timbre?)
  - Phase coherence (noise-incoherent; tones-coherent)
  - Smoothness or roughness
- **Stationary spectrum**
  - Formant structure;
- **Amplitude-frequency-phase dynamics**
  - Amplitude dynamics (attack, decay)
    - amplitude modulation (roughness)
  - Frequency dynamics
    - relative timings of onsetsand offsets of partials
    - frequency modulation (vibrato)
  - Phase dynamics (phase shifts, chorus effect)
- **Analogy with phonetic distinctions in speech**
    - Vowels (stationary spectra; formant structure)
    - Consonants (dynamic contrasts: amplitude, frequency & noise)

Stationary and dynamic factors in timbre perception

- **Stationary spectrum**
  - **Formant structure; Harmonicity**
- **Amplitude-frequency-phase dynamics**
  - **Amplitude dynamics (attack, decay)**
    - **amplitude modulation (roughness)**
  - **Frequency dynamics**
    - **relative timings of onsetsand offsets of partials**
    - **frequency modulation (vibrato)**
  - **Phase dynamics (noise, phase coherence, chorus effect)**
- **Analogy with phonetic distinctions in speech**
    - **Vowels (stationary spectra; formant structure)**
    - **Consonants (dynamic contrasts: amplitude, frequency & noise)**

Some methods for studying the perceptual space

1. Try to derive the structure of the space from the dimensionality of responses

    - Similarity magnitude estimations
    - Similarity rankings
    - Multidimensional scaling

2. Systematically vary acoustic parameters known to influence timbre to find acoustic correlates of perceptual dimensions, e.g.
    - Formant structure
    - Attack and decay parameters

Grey (1975) Timbre: Perceptual dimensions

Spectrum as a function of intensity (trumpet)

Please see Figure 4-3 in Butler, David. *The Musician's Guide to Perception and Cognition*. New York: Schirmer Books ; Toronto: Maxwell Macmillan Canada, New York: Maxwell Macmillan International, c1992.

Singer's formant

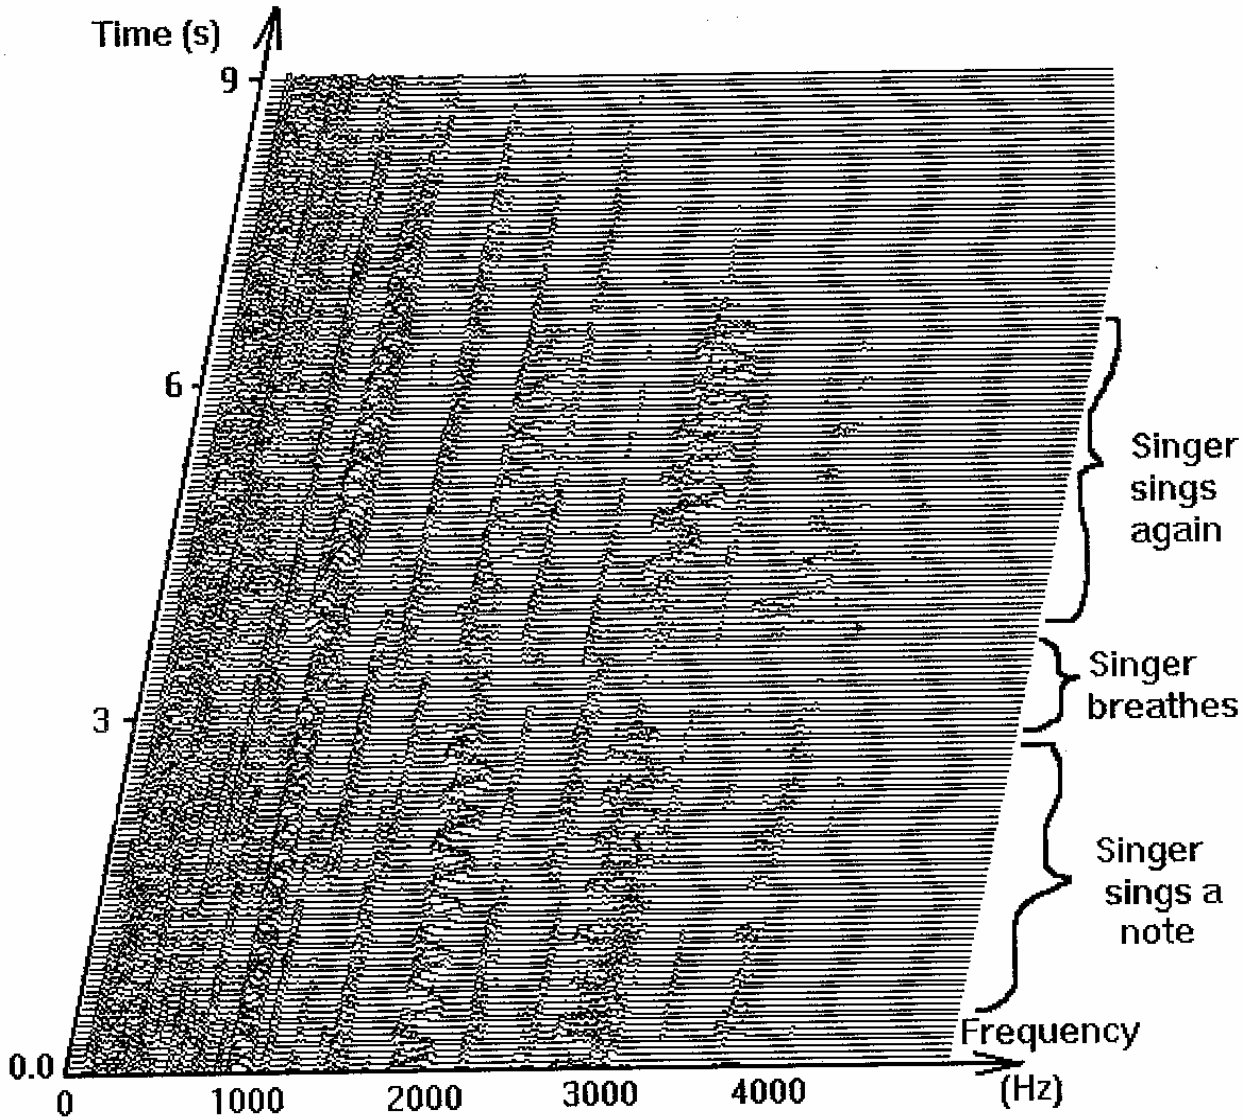

Figure 11.12 The singer's formant is evident in this waterfall plot of the last two notes of the soprano aria "Un Bel Di Vedremo," from Puccini's *Madame Butterfly.* Common frequency modulation of the first three partials allows the fundamental to be picked out visually.

Singer's formant

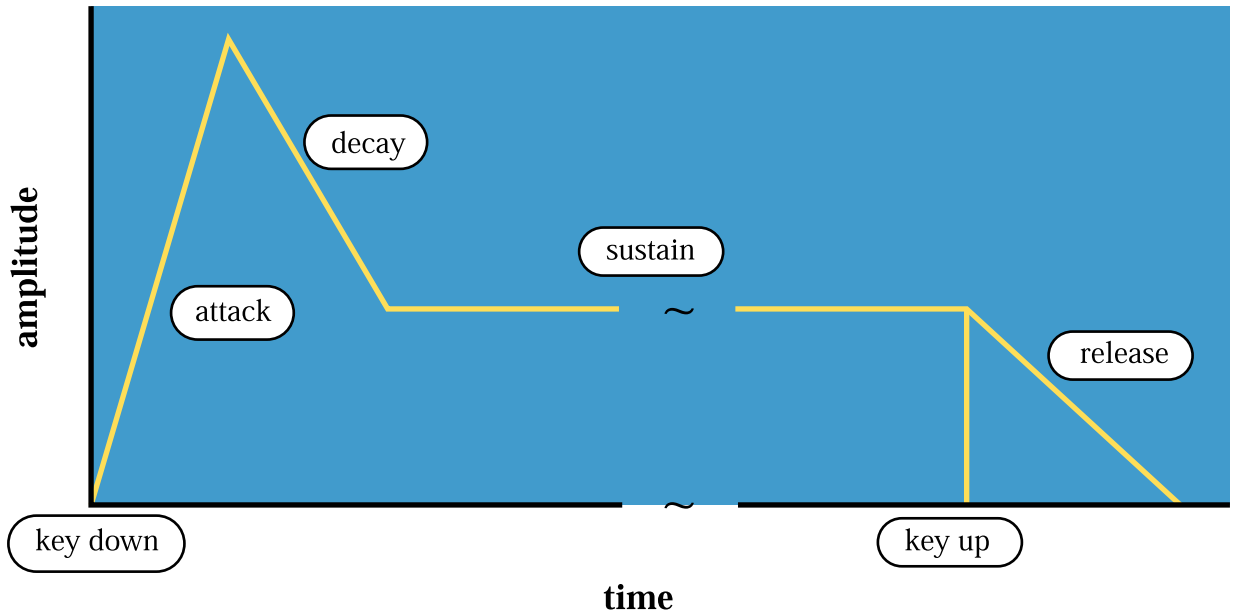
Amplitude dynamics (envelope, intensity contour)



Frequency dynamics of note onsets (clarinet)

Please see Figure 4-4 in Butler, David. *The Musician's Guide to Perception and Cognition*. New York: Schirmer Books ; Toronto: Maxwell Macmillan Canada, New York: Maxwell Macmillan International, c1992. ISBN: 0028703413.

Time-course of harmonics

Please see Figure 3 in Deutsch, D., ed. *The Psychology of Music*. San Diego: Academic Press, 1999.

Speech Neurogram

Please see Delgutte, B. "Auditory Neural Processing of Speech." In *The Handbook of Phonetic Sciences*. Edited by W. J. Hardcastle, and j. Laver. London: Blackwell, 1995.

Possible interval-based neural correlates for basic phonetic distinctions

CHARACTERISTIC	ACOUSTIC DISTINCTION	PHONETIC CLASS	EXAMPLES	INTERVAL CORRELATES
Voice Pitch (80-400 Hz) pitch contours, ² over time	voice pitch, F0 prosody			most common interval running interval ²
Voice onset time	VOT			prominent interval between onset/offset responses
Spectral Pattern stationary low frequency	 formant pattern nasal resonances	 vowels nasals	 [u], [ae], [i] [m], [n]	 intervals for periodicities 50-5000 Hz
Spectro-temporal pattern fast transition slow transition	 formant transitions	 consonants semivowels dipthongs	 [b], [d], [g] [w], [r], [y] [aʸ], [aʷ],[eʸ]	cross-BF intervals (?) timing of FM responses (?) slow ² in interval distr. low freq modulations interactions
Spectral Dispersion	noise-excitation (frication)	fricative consonants	/f/, /s/,/ʃ/,/v/,/θ/	semi periodic temporal struct. ;phase incoherence
Voiced-unvoiced	voiced/unvoiced	stop consonants fricatives whispered/voiced	[b]/[p] [v]/[f]	presence of harmonic structure in intervals degree interval dispersion
Dynamic Amplitude Patterns amplitude time profiles	abrupt/gradual ² (buildup / decay)	affricative/fricative	/tʃ/ vs /ʃ/ *chip* vs *ship*	adaptation + running interval buildup patterns (Autocorrelations ² shape)
Rhythm		metrical aspects word rhythm speaking rate		Longer interval patterns (50-500 msec)
Duration	duration			prominent interval between onset & offset responders
Suprasegmental structure	word time pattern	whole word patterns		longer time structures

Timbre: summary

- Time-invariant properties (static)
  - Stationary spectrum
  - Relatively well-understood & characterized

- Time-varying properties (dynamic)
  - Amplitude dynamics (envelope)
  - Frequency dynamics (spectral changes, vibrato)
  - Phase shifts (chorus effect & electronic contexts)
  - Relatively poorly understood & characterized

Reading/assignment for next meeting

- **Tuesday, March 2**
- **Consonance, dissonance, and roughness**

- **<u>Reading</u>:**
  - **Deutsch, Rasch & Plomp chapter re: beats, combination tones, and consonance**
  - **also Burns chapter on intervals & scales**

  (look at section on consonance)
