2.626 - Fundamentals of Photovoltaics

Concept Quiz #2 - September 23, 2008

Question #1:

- a) In the semiconductor band diagram below, electrons are denoted as filled circles. Draw a <u>circle</u> around the electrons that contribute to current.
- b) Draw a <u>rectangle</u> around the electrons that can be excited by light. Explain your answer for full credit.

Question #2:

a) Circle the type of semiconductor that absorbs light more readily:

direct bandgap semiconductor (e.g., GaAs)

indirect bandgap semiconductor (e.g., Si)

b) Explain which type of semiconductor (direct or indirect bandgap) would be more appropriate for a thin film solar cell device.
